### A. RATIONALE:

The subject Engineering Mathematics-III, is a common paper for Engineering branches. This subject includes Matrices, Laplace Transforms, Fourier Series, Differential Equations and Numerical Methods etc. for solution of Engineering problems.

### **B.** OBJECTIVE:

On completion of study of Engineering Mathematics-III, the students will be able to:

- 1. Apply matrices in Engineering mechanics, electrical circuits and linear programming.
- 2. Transform Engineering problems to mathematical models with the help of differential equations and familiarize with the methods of solving by analytical methods, transform method, operator method and numerical methods.
- 3. Solve algebraic and transcendental equations by Iterative methods easily programmable in computers.
- 4. Analysis data and develop interpolating polynomials through method of differences.

### Topic wise distribution of periods

| Sl. No. | Topics                            | Period |
|---------|-----------------------------------|--------|
| 1       | Matrices                          | 04     |
| 2       | Differential equation             | 12     |
| 3       | Laplace transform                 | 14     |
| 4       | Fourier series                    | 14     |
| 5       | Numerical methods                 | 04     |
| 6       | Finite difference & Interpolation | 12     |
|         | Total:                            | 60     |

# **COURSE CONTENTS**

# 1. MATRICES

- 1.1 Define rank of a matrix.
- 1.2 Perform elementary row transformation to determine the rank of a matrix.
- 1.3 State Rouche's Theorem for consistency of a system of linear equations in 'n' unknowns.
- **1.4** Solve equations in three unknowns testing consistency.

### 2. Linear Differential Equations

- 2.1 Define Homogeneous and non-homogeneous differential equations with constant coefficients with examples.
- 2.2 Find general solution of linear equations in terms of C.F. and P.I.
- 2.3 Derive rules of finding C.F. and P.I. in terms of operator D.
- 2.4 Define Partial Differential equations(P.D.E.)
- 2.5 Form partial differential equations by eliminating arbitrary constants and arbitrary functions.
- 2.6 Solve partial differential equations of the form P.p+Q.q=R
- 2.7 Solve Engineering problems on 2.1-2.6.

# 3. LAPLACE TRANSFORMS

<sup>3.1</sup> Define Gamma function and  $\Gamma(n+1) = n!$  and find  $\Gamma(\frac{1}{2}) = \sqrt{\pi}$  (No

problem)

04

12

- 3.2 Define Laplace transform of a function f(t) and inverse laplace transform.
- 3.3 Derive L.T. of standard functions and explain existence conditions of L.T.
- 3.4 Explain linear, shifting and Change of scale property of L.T.
- 3.5 Formulate L.T. of derivatives, integrals, multiplication by  $t^n$  and division by t.
- 3.6 Derive formula of inverse L.T.
- 3.7 Solve Linear Differential Equations with constant coefficients associated with initial conditions using Transform Method(upto 2<sup>nd</sup> order only).

### 3.8 Solve problems on 3.2-3.7

### FOURIER SERIES

- 4.1 Define periodic functions
- 4.2 State Dirichlet's conditions for the Fourier expansion of a function and its convergence.
- 4.3 Express periodic function f(x) satisfying Dirichlet's conditions as a Fourier series.
- 4.4 State Euler's formulae.
- 4.5 Define Even and Odd functions and Obtain F.S. in  $(0 \le x \le 2\pi \text{ and } -\pi \le x \le \pi)$
- 4.6 Obtain F.S. of continuous functions and functions having points of discontinuity in  $(0 \le x \le 2\pi \text{ and } -\pi \le x \le \pi)$ .
- 4.7 Solve problems on 4.1-4.6

### NUMERICAL METHODS

- 5.1 Appraise limitations of analytic method of solution of algebraic and transcendental equations.
- 5.2 Derive Iterative formula for finding the solutions of algebraic and transcendental equations by:a) Bisection method
  - b) Newton Raphson method
- 5.3 Solve problems on 5.2

### FINITE DIFFERENCE and INTERPOLATION

- 6.1 Explain finite difference and form table of forward and backward difference.
- 6.2 Define shift operator(E) and establish relation between E and difference operator( $\Delta$ ).
- 6.3 Derive Newton's forward and backward interpolation formula for equal interval.
- 6.4 State Lagrange's Interpolation formula for unequal intervals.
- 6.5 Explain numerical integration and state
  - 6.5.1 Newton-Cote's formula(No derivation)
  - 6.5.2 Trapezoidal Rule
  - 6.5.3 Simpson's  $1/3^{rd}$  rule
- 6.6 Solve Problems on 6.1-6.5

| Maximum marks:  | 100     | End Semester Examination: | 70       |  |  |  |

# **Course objectives**

Students will develop ability towards

- Determination of stress, strain under uniaxial loading (due to static or impact load and temperature) in simple and single core composite bars.
- Determination of stress, strain and change in geometrical parameters of cylindrical and spherical shells due to pressure
- Realization of shear stress besides normal stress and computation of resultant stress in two dimensional objects.
- Drawing bending moment and shear force diagram and locating points in a beam where the effect is maximum or minimum.
- Determination of bending stress and torsion stress in simple cases

Determination of critical load in slender columns thus realizing combined effect of axial and bending load.

| Chapter<br>ID | Topics<br>ID | Contents   | Hours |
|---------------|--------------|--|-------|
| 1.0           | Simple       | stress& strain   | 15    |
|               | 1.1          | Types of load, stresses & strains,(Axial and tangential) Hookes law,<br>Young's modulus, bulk modulus, modulus of rigidity, Poisson's ratio,<br>derive the relation between three elastic constants, |       |
|               | 1.2          | Principle of super position, stresses in composite section   |       |
|               | 1.3          | Temperature stress, determine the temperature stress in composite bar<br>(single core)   |       |
|               | 1.4          | Strain energy and resilience, Stress due to gradually applied, suddenly applied and impact load  |       |
|               | 1.5          | Simple problems on above.  |       |
| 2.0           |              | linder and spherical shell under internal pressure   | 9     |
|               | 2.1          | Definition of hoop and longitudinal stress, strain   |       |
|               | 2.2          | Derivation of hoop stress, longitudinal stress, hoop strain, longitudinal  |       |
|               |              | strain and volumetric strain   |       |
|               | 2.3          | Computation of the change in length, diameter and volume   |       |
|               | 2.4          | Simple problems on above   |       |
| 3.0           |              | nensional stress systems   | 12    |
|               | 3.1          | Determination of normal stress, shear stress and resultant stress on oblique plane   |       |
|               | 3.2          | Location of principal plane and computation of principal stress  |       |
|               | 3.3          | Location of principal plane and computation of principal stress and<br>maximum shear stress using Mohr's circle  |       |
| 4.0           | Bending      | g moment& shear force  | 12    |
|               | 4.1          | Types of beam and load   |       |
|               | 4.2          | Concepts of Shear force and bending moment   |       |
|               | 4.3          | Shear Force and Bending moment diagram and its salient features  |       |
|               |              | illustration in cantilever beam, simply supported beam and over hanging  |       |
|               |              | beam under point load and uniformly distributed load   |       |
| 5.0           | Theory       | of simple bending  | 12    |
|               | 5.1          | Assumptions in the theory of bending,  |       |
|               | 5.2          | Bending equation, Moment of resistance, Section modulus& neutral axis.   |       |
|               | 5.3          | solve simple problems  |       |

### 6.0 Combined direct & Bending stresses

- 6.1 Define column
- 6.2 Axial load, Eccentric load on column,
- 6.3 Direct stresses, Bending stresses, Maximum& Minimum stresses. Numerical problems on above.
- 6.4 Buckling load computation using Euler's formula (no derivation) in columns with various end conditions

### 7.0 Torsion

- 7.1 Assumption of pure torsion
- 7.2 The torsion equation for solid and hollow circular shaft
- 7.3 Comparison between solid and hollow shaft subjected to pure torsion

| Theory periods:                                       | 5 P/week | Class Test:               | 20              |  |  |
| Tutorial:   |          | Teacher's Assessment:     | 10              |  |  |
| Maximum marks:  | 100      | End Semester Examination: | 70              |  |  |

# Course Objectives:

Students will develop an ability towards

- Comprehending significance of thermodynamic properties in order to analyze a thermodynamic system from macroscopic view point
- Computing work and heat transfers across system boundaries
- Comprehending and applying first and second law of thermodynamics in closed and open systems involving steady flow
- Determining thermodynamic properties of water-vapor-steam using steam tables and Mollier chart
- Comprehending and applying gas laws applicable to ideal gas in order to determine thermodynamic properties as well realizing differences in real gases

| Chapter<br>ID | Topics<br>ID | Contents  | Hours |
|---------------|--------------|---|-------|
| 1.            | Concep       | ts and terminology  | 8     |
|               | 1.1          | Thermodynamic systems   |       |
|               | 1.2          | Macroscopic and microscopic views of study, concept of continuum  |       |
|               | 1.3          | Thermodynamic properties of a system (Pressure, volume, temperature and units of measurement)               |       |
|               | 1.4          | Intensive and extensive properties  |       |
|               | 1.5          | State and Process   |       |
|               | 1.6          | Thermodynamic equilibrium   |       |
|               | 1.7          | Quasistatic process   |       |
| 2             | Energy       | and Work Transfer   | 10    |
|               | 2.1          | Conceptual explanation of energy, work and heat   |       |
|               | 2.2          | Work transfer, Displacement work, forms of work transfer  |       |
|               | 2.3          | Modes of heat transfer (Introductory concepts of conduction, convection                                     |       |
|               |              | and radiation)  |       |
|               | 2.4          | Sensible and latent heat, specific heat   |       |
|               | 2.5          | Energy and its sources  |       |
| 3             |              | aw of thermodynamics  | 15    |
|               | 3.1          | First Law of thermodynamics   |       |
|               | 3.2          | Energy as system property, forms of stored energy   |       |
|               | 3.3          | First law for a closed system undergoing a cyclic process   |       |
|               | 3.4          | First law for a closed system undergoing change of state  |       |
|               | 3.5          | Concept of enthalpy   |       |
|               | 3.6          | First law applied to steady flow processes  |       |
|               |              | Steady Flow Energy Equation and its application to nozzle, turbine and                                      |       |
|               |              | compressor  |       |
| _             | 3.7          | Perpetual motion machine of first kind  |       |
| 4             |              | Law of Thermodynamics   | 15    |
|               | 4.1          | Limitations of first law  |       |
|               | 4.2          | Thermal reservoir   |       |
|               | 4.3          | Concept of heat engine, heat pump and refrigerator  |       |
|               | 4.4          | Statement of Second law of thermodynamics (Clausius and Kelvin Planck),                                     |       |
|               | 4 5          | Perpetual motion machine of second kind   |       |
|               | 4.5          | Carnot cycle  |       |
|               | 4.6          | Application of second law in heat engine, heat pump, refrigerator and determination of efficiencies and COP |       |

- 4.7 Clausius inequality
- 4.8 Defining entropy, entropy and disorder
- 4.9 Principle of increase in entropy

# 5 Working substances

- 5.1 Pure substance, what it is
- 5.2 Phase change phenomenon of pure substance and associated terminology
- 5.3 p-v, p-h and T-s diagrams
- 5.4 Specific heats
- 5.5 Dryness fraction and its measurement
- 5.6 Steam table and its use to determine unknown properties
- 5.7 Use of Mollier chart to determine unknown properties

### 6 Ideal gases and real gases

- 6.1 Boyle's law, Charles' law, Avogadro's law, Dalton's law of partial pressure, Guy Lussac equation, Equations of state, Characteristic Gas constant and Universal Gas constant
- 6.2 Work transfer equations for ideal gases: Constant pressure, constant volume, isothermal, polytropic, isentropic processes
- 6.3 Van der wal equation of state for real gases, Difference between ideal and real gases

### MECHANICAL ENGINEERING LABORTORY

| Name of the Course: Diploma in MECHANICAL ENGINEERING |          |                           |                 |
|---|----------|---------------------------|-----------------|
| Course code:  | MEP 302  | Semester                  | 3 <sup>rd</sup> |
| Total Period:   | 90       | Examination               | 4 hrs           |
| Lab. periods:   | 6 P/week | Term Work                 | 25              |
| Maximum marks:  | 100      | End Semester Examination: | 75              |

### **Course Objectives**

Students will develop an ability towards

- Conducting experimentations to determine properties of a solid material subject to uni axial loading and impact
- Conducting experimentations towards determining characteristics of a fuel
- Study of equipment employing using fuels

### 1. Strength of Materials Laboratory

- 1.1 Determine end reactions in a beam
- 1.2 Determination of Young's modulus using Searl's apparatus
- 1.3 Determination of torsional rigidity of the shaft using torsion testing machine
- 1.4 Determination of salient points (Young's modulus, yield point, fracture point) from stressstrain curve using Universal Testing Machine
- 1.5 Determination of hardness number by Rockwell/Vickers hardness testing machine
- 1.6 Determination of toughness using Impact testing machine (Charpy/Izod)

### 2. Thermal Engineering Laboratory

- 2.1 Study of 2-S, 4-S petrol engine
- 2.2 Study of 2-S, 4-S diesel engine
- 2.3 Determination of Flash point and fire point
- 2.4 Joule's experiment
- 2.5 Study of boilers (Fire tube, water tube)
- 2.6 Study of steam engine

# WORKSHOP PRACTICE-II

| Name of the Course: Diploma in MECHANICAL ENGINEERING |          |                           |                 |
|---|----------|---------------------------|-----------------|
| Course code:  | MEP 303  | Semester                  | 3 <sup>rd</sup> |
| Total Period:   | 105      | Examination               | 4 hrs           |
| Lab. periods:   | 7 P/week | Term Work                 | 25              |
| Maximum marks:  | 100      | End Semester Examination: | 75              |

### **Course Objectives**

Students will develop an ability towards

- Practicing fitting, carpentry, smithy and machining
- Understanding the tools and equipment used in the practices
- Realize the time and resource utilization in the practices

### **1.** Fitting practices

- 1.1 Preparation of caliper
- 1.2 Preparation of try square
- 1.3 Preparation of hammer
- 1.4 Preparation of male-female joint

### 2. Smithy Practices

- 2.1 Preparation of door ring with hook
- 2.2 Preparation of hexagonal head bolt
- 2.3 Preparation of octagonal flat chisel

### **3** Carpentry Practices

- 3.1 Cutting of slot, botch, mortise and Tenon
- 3.2 Preparation of single dove tail joint

### 4 Metal Machining practices

- 4.1 Plain turning
- 4.2 Step turning
- 4.3 Taper turning
- 4.4 Grooving
- 4.5 Chamfering
- 4.6 External threading
